**PLANT HANGER**

# COLAB PLANT HANGER

---

## Materials

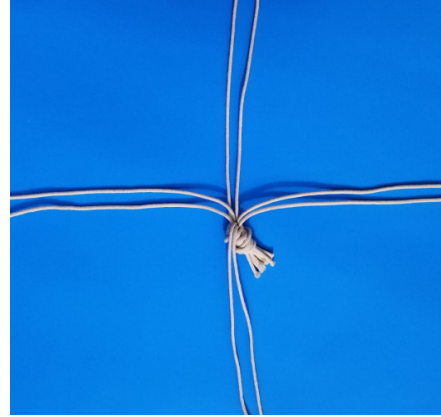

- 8 rope strands (6ft-7ft each)
- 1 rope strand (1ft)
- Plant pot
- O-ring

## Step 1: Prepare your rope to fit the plant pot

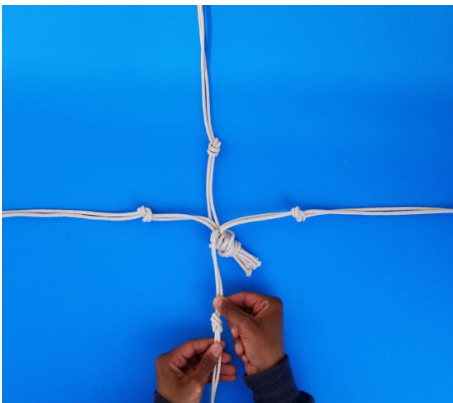

You will create a group of knots to fit and hold the plant pot.

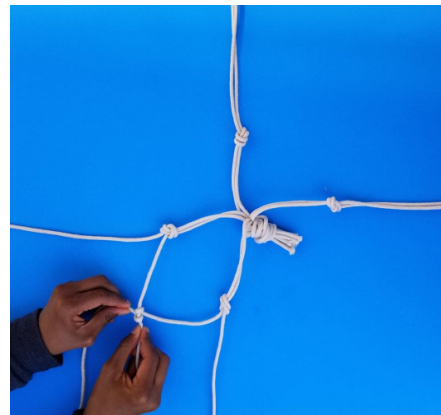

**1.**  
Create a base knot by tying all eight pieces of the longer rope pieces in a simple knot in one end.

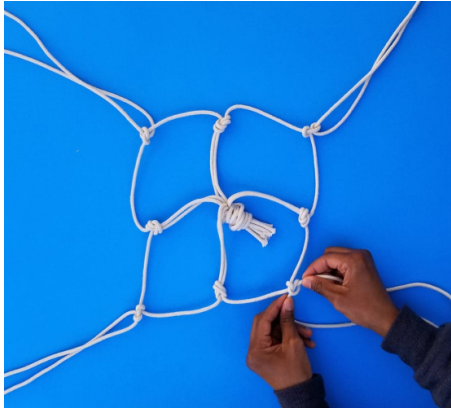

**2.**  
Divide the strands into 4 pairs. Keep your base knot in the middle.

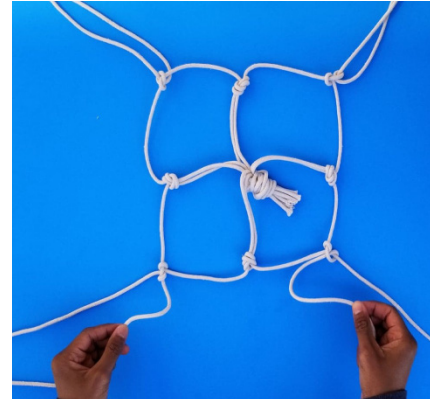

**3.**  
Tie a knot in each pair, about 5 inches from the base knot that you created.

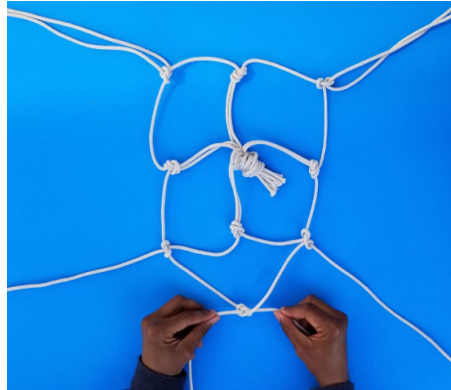

**4.**  
Take strands from neighboring rope pairs and tie them together forming a diamond shape.

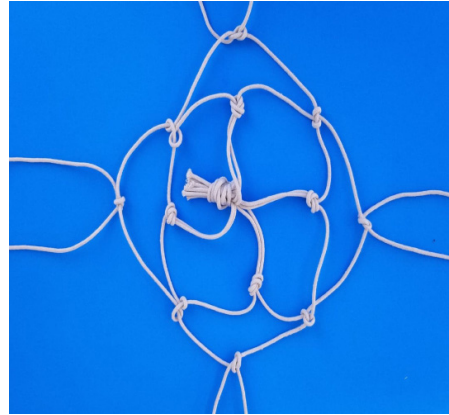

**5.**  
Repeat the previous step  
in all four pairs.

**6.**  
Take one strand from  
each neighboring pair.

**7.**  
Tie them together  
to creating another  
diamond shape.

**8.**  
Repeat the last  
two steps to tie all  
neighboring pairs  
together.

**9.**  
Place your plant pot in  
the middle.

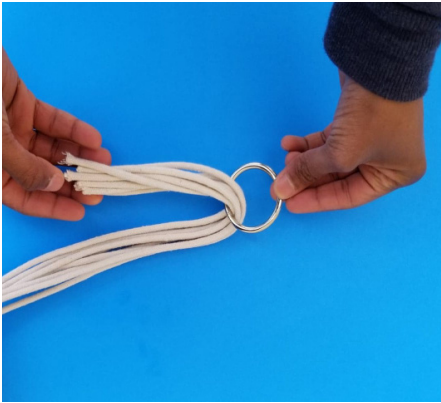

**10.**  
Grab your strands and  
lift it to see how the  
pot fits inside the plant  
hanger.

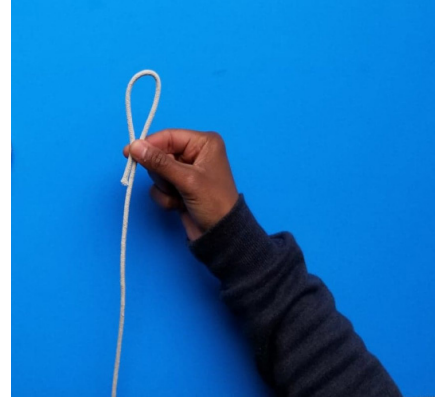

## Step 2: Tying gathering knot to secure the ring.

You will need a ring and an additional piece of rope.

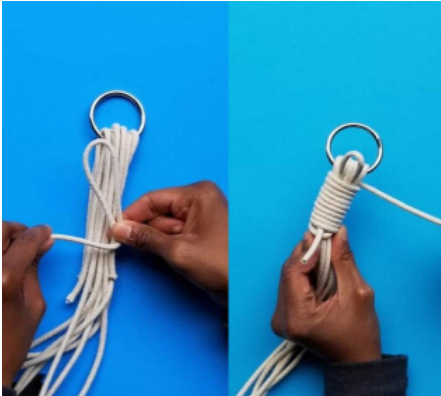

---

**1.** Insert the ring in the other end of your strands and fold about 5 inches of rope inside the ring.

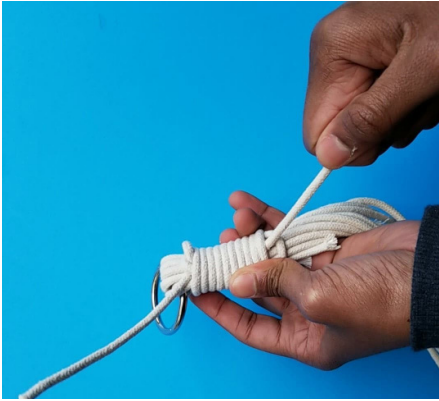

**2.** Grab the 1 foot piece of rope and make a small loop.

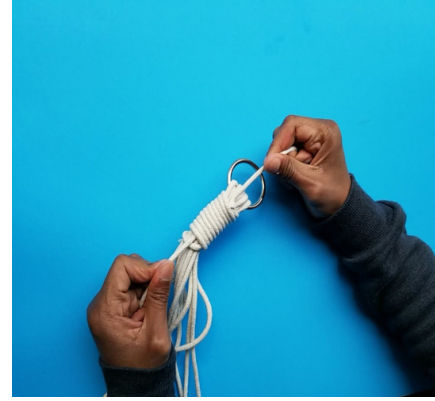

**3.** Place the loop you made on the folded strands, and wrap the same piece of rope 4 to 5 times around the loop and the folded strands at the same time.

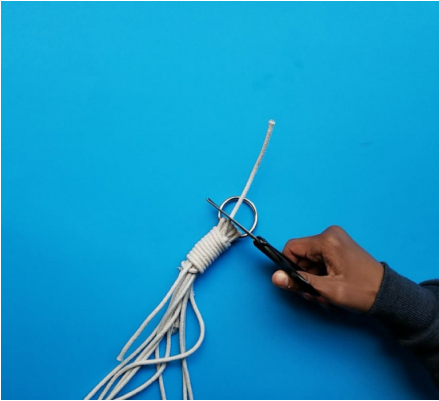

**4.** Take the end of the piece of rope that you have wrapped and pull it through the loop.

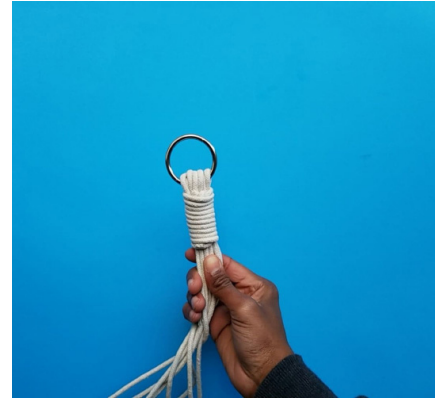

**5.**  
Pull the strand at the  
bottom of the loop.

**6.**  
Pull the strands from  
both ends tightly so the  
loop at the top is pulled  
into the wrapped  
section.

**7.**  
Cut both strands.

**8.**  
This is how the ring  
will look.

**9.**  
Now decide where you  
want to hang your plant.
